

OLATION<sup>®</sup> integrates the capabilities and benefits of relational and analytical databases into a single application.

- OLATION Calculation Engine that integrates seamlessly with Microsoft SQL Server™, MySQL, SAP HANA, Oracle and other relational databases.
- True real-time Multidimensional OLAP (MOLAP) that is not based on Relational OLAP (ROLAP) and therefore does not have the performance limitations of such tools.
- Easy mapping of existing relational structures into corresponding multidimensional structures—and this process needs to be done only once.
- Defined relationships between environments, enabling intelligent drill-down into cubes, with corresponding drill-through into relational transactions.
- Ability to construct multidimensional data types, such as dimensions and cubes, with automatic creation of the corresponding relational structures.
- Access to external data sources by reference using a SQL query to the data or by staging and transforming the data in tables in the OLATION database.
- Full API supporting third-party access to all OLATION functions.
- Total algebraic expression across all dimensions

OLATION creates dramatic business impact in a number of ways:

- Serves as one single version of the truth, not a copy of transactional data that has been staged for business intelligence analytics.
- Offers enterprise planning, analytical, and reporting information systems.
- Delivers true dynamism throughout the environment, allowing data to be changed bi-directionally.
- Reduces application development time and costs.
- Reduces application implementation costs and maintenance.
- Markedly increases end-user productivity.
- Leverages existing skill set of the end user by allowing OLATION to be managed through existing tools, such as Excel.

A SINGLE TOOL  
WITH GAME-  
CHANGING  
RESULTS

OLATION gives executives and end-users the comfort of working with the programs they know, with direct connection to the current transactional data they need to make smarter and faster decisions.

For end users of Excel and other analytical applications, OLATION drives productivity, turning standard analytical applications into dynamic bi-directional tools powered by real-time data.

And OLATION is a solution for IT managers who are asked to produce answers to increasingly complex analytical issues, while ensuring data integrity and security, as well as increasing staff productivity.

OLATION does all of this within a SINGLE environment—reducing costly and timely application development and maintenance, increasing productivity, and providing the powerful answers end users seek.

IMPROVE RESULTS  
FOR CEOs,  
END USERS, AND  
IT MANAGERS

With OLATION, data related to the here-and-now is seamlessly combined with data used for planning and projections. OLATION integrates relational and analytical database technologies (OLTP and OLAP) with end-user tools, such as Excel, Access, Web browsers, and SharePoint, to create a single solution that provides the flexibility and dynamics the businesses demand. All the while, OLATION offers the control, data integrity, and security your systems require.
